☐ Please call about this case prior to fabrication.
☐ Enroll this case in Appliance Protection (Additional fee).
☐ Please make this design a MyWay™ (Representative will call).
☐ MyWay™ # ☐☐☐

☐ U ☐ L **Saggital** ☐ Fixed ☐ Removable
If prescribing for anterior movement please include an opposing model and a bite registration with centric A/P relation and 3mm posterior opening. No labial bow.

☐ U ☐ L **Schwarz** ☐ Fixed ☐ Removable
Upper includes one screw for primary and mixed dentition, two for permanent dentition. No labial bow.

☐ U ☐ L **Transverse**
Upper includes one screw for primary and mixed dentition, two for permanent dentition. Includes posterior coverage. No labial bow. Include an opposing model and bite registration with centric A/P relation and 2-3mm posterior opening.

☐ U **RPE (Rapid Palatal Expander)** ☐ Banded ☐ Bondable
Available in banded or bondable versions. For bondable please include an opposing model and a bite registration with centric A/P relation and 2-3mm posterior opening.

☐ L **'E' Appliance**
Spring-loaded lingual arch appliance designed for molar distalization.

☐ U ☐ L **Haas Expander** ☐ Banded ☐ Bondable
Acrylic pads provide continuous pressure over a greater area when activated. Available in banded or bondable versions.

☐ L **F.L.E.A (Fixed Lingual Expansion Appliance)**
RPE screw soldered to molar bands. Includes stabilizing wire with sweeper springs to provide constant even pressure for anterior alignment.

☐ U ☐ L **Fan Expander** ☐ Fixed ☐ Removable
Pivoting hinge maintains the posterior while expansion is achieved in the anterior. Fixed version contains a one-part hinge. Removable contains a two-part hinge.

☐ U ☐ L **Anterior Push Expander** ☐ Fixed ☐ Removable
Provides anterior movement without the use of full palate acrylic. Posterior coverage may be added.

☐ U **Cettlin**
This anterior bite plane is designed to be used with headgear. Provides continual distal force when headgear is not in use.

☐ U **Pendulum**
TMA springs exert continuous force to distalize the molars.

☐ U **Pendex**
A midline screw is added to the Pendulum appliance for arch development.

☐ L **Franzulum**
Lingual acrylic pad, cuspid putter wires and occlusal bicuspid stops. Activation is achieved with coil springs.

☐ U **Frog®**
Allows for molar distalization with the added convenience of a two-part mechanism which can be adjusted or modified. Easily adapted for unilateral or bi-lateral correction.

☐ U **Nord**
Unilateral crossbite correction. Please include an opposing model and a bite registration with centric A/P relation and 3mm posterior opening.

☐ U ☐ L **Quad Helix** ☐ Fixed ☐ Removable ☐ Standard ☐ 3D™
Used when minor expansion is needed in early treatment and there is some rotation of the molars required. May be fabricated as fixed or removable. NorthStar also fabricates a 3D™ Quad Helix which utilizes RMO's Blue Elgiloy™ wire. *Please specify either standard or 3D™ when ordering.*

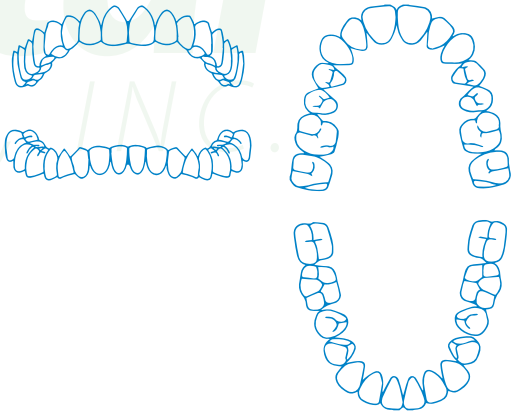
☐ U ☐ L **Spring Jet** ☐ I ☐ II
Spring Jet I is used for slow, even palatal expansion. Spring Jet II has double the power for rapid palatal expansion.

☐ U ☐ L **Distal Jet** ☐ Bi-lateral ☐ Unilateral
Allows distalization of first or second molars. Bi-lateral and unilateral versions are available.

☐ U **CD Distalizer**
A series of tubes, shafts and springs are activated by adjusting a Gurin lock to provide rapid, stable movement.

☐ U ☐ L **Inman Expander**
Our standard RPE with the addition of Inman Power Components™ and anterior sweeper springs. Combines palatal expansion with distalization.

☐ U ☐ L **Design your Own / Special Instructions**
Please draw and describe the appliance you desire.
Include a suitable bite registration.



Lab Use Only: BBP? ☐
