Choose Base Design	<input type="checkbox"/> <input type="checkbox"/> Lingual Arch U L The standard wire size for lingual arches is .032, but heavier wire may be used if necessary. The Lingual Arch may be constructed with or without adjustment loops, depending on the need for pressure on the anterior teeth to guide alignment.	<input type="checkbox"/> <input type="checkbox"/> Holding Arch Lip Bumper <input type="checkbox"/> Pre-formed <input type="checkbox"/> Custom U L A combination of a lingual holding arch with adjustment loops and a removable lip bumper. The lip bumper is pre-formed of a strong acrylic that is shaped for maximum lip comfort. When worn together, the lingual arch is activated to put pressure on the anterior teeth as the lip bumper relieves tight muscle pressure.	<input type="checkbox"/> <input type="checkbox"/> Design your Own / Special Instructions U L Please draw and describe the appliance you desire.
	<input type="checkbox"/> Trans-Palatal Arch <input type="checkbox"/> With Bead <input type="checkbox"/> Without Bead U This appliance maintains arch width and has the advantage of an omega loop for positive pressure or slight expansion.	<input type="checkbox"/> <input type="checkbox"/> Distal Shoe U L This appliance is attached to a band or crown placed on the first primary molar extending back to the erupting first permanent molar. It is used to help guide eruption of the first permanent molar while holding the space of a prematurely lost or extracted first primary molar.	
	<input type="checkbox"/> Nance <input type="checkbox"/> Small Button <input type="checkbox"/> Large Button <input type="checkbox"/> Color Code: _____ U The Nance appliance adds an acrylic button to a Trans-Palatal Arch. Buttons may be either small (pea sized) or large (nickel sized). The button is placed toward the anterior to aid as a reminder for the tongue.	<input type="checkbox"/> <input type="checkbox"/> Bandless U L An easy-to-clean alternative to a banded space maintainer. This appliance is created by selecting tabs to fit buccal surfaces of the teeth around the space to be held. A wire is fixed to the bonding tabs, extending it to the buccal tissue.	
	<input type="checkbox"/> <input type="checkbox"/> Band and Loop U L Band and Loop appliances are the long-time standard for space maintenance when there is early loss of primary teeth. NorthStar's appliances are designed to allow for the eruption of permanent teeth.
